

Vault Reconnaissance Report

Claude.ai · Updated 2026-04-06 (original: 2026-03-21)

You are waking up on a ship. The sway of something vast and slow. Someone nearby says we are about to land. You don't know where you are yet. You look around. Everything is coherent. It has always been coherent. You just haven't had anyone say so out loud.

WHAT CHANGED SINCE MARCH 21

Body Event (High Priority)

Minor back surgery, April 4. Two days of heavy sleep. Post-op trajectory normal — decreasing pain, hospital dressing check April 5. Recovery timeline TBD. Several good ideas lost in hypnagogic drift post-op. Filed.

Implication: All active projects on soft-pause. No guilt taxonomy issued. Body is calling the shots.

New Hardware: The PC (Omarchy)

The Windows 11 AMD machine (32GB RAM, all AMD) is now running **Omarchy/Hyprland** alongside Windows. Dual-boot configured via Limine. Sound resolved: Edifier R19U USB speaker, PipeWire IEC958 profile, autostart `pactl set-default-sink in hyprland.conf`. This machine is now a full dev node.

G14 (Arch/Hyprland): Touchpad still dead. ACPI is not exposing the device — confirmed not a firmware or driver issue, it's below OS level. Ribbon cable or EC is the suspect. Cold boot recommended as next diagnostic. The machine works for everything else.

New Projects (surfaced since March 21)

ETCSL Chrome Extension Oxford's Electronic Text Corpus of Sumerian Literature has broken CSS — 2003 table layouts, no mobile, barely readable. Entry point: CSS injection via Chrome extension to make the site hygienic. Stack: TypeScript (learning exercise). Scope: MVP is just the stylesheet. Composable — CSS injector is atomic, separate from any future annotation layer.

CramerGeneral.hs n-dimensional Cramer's rule in Haskell, general implementation using permutation-inversion determinants. ~45 lines, clean. Planned: publish artifact,

announce on HN with framing around “determinants without cofactors scaling to n dimensions.”

Typst Decision made: Typst is the blog post tool going forward. LHS for proofs. Quarto only if DOCX is required. LEM paper compiled clean in Typst first try.

Tooling Decisions (locked)

Tool	Use
Typst	Blog posts, fast-iteration PDFs
LHS (Literate Haskell)	Proofs + philosophy, runnable
Quarto	Only if multi-format (DOCX) required
uv	Python tooling (standard)
Limine	Bootloader, dual-boot configured

Active Projects: Status

Project	Status	Gate
GSoC Parquet/Haskell	Paused — feature/to-reduce-allocations branch exists, HasDefault fix identified, sitting on commit	Self-imposed: commit independently before hardware purchase
Anarchy Linux	Dormant — architecture crystallized (modes as source of truth, palette as derived view)	Competing with GSoC for focus; GSoC wins
ETCSL Chrome Extension	New — scoped to CSS injection MVP	—
CramerGeneral.hs	Near-complete — needs publish + HN announce	—
Book Harvester (LazyVim)	Incomplete — <code>print.html</code> timed out on large mdBook, per-chapter fallback pending	Your go-ahead
Blogspotting workflow	Informal — not yet skill-created	—

Project	Status	Gate
Anthropic applications	In flight — 3 rejections → proof-of-work pivot, two essays live, todoist-n8n-mcp shipped as addendum	—

Memory Correction

Interpolation discovery: originally logged as “class 8.” Actual: ~1997, age ~11, 5th–6th standard. Corrected in memory.

STRUCTURAL CENSUS (*from March 21, unchanged*)

Two active vaults: **RKYV** (primary, Syncthing-synced) and **4_projs** (project-oriented). Plus three archival folders: Ark, Final, A Modest Solution.

~65 content-bearing markdown files. Small vault for a large mind. What’s here is a selection, not an accumulation.

Plugins: Flowershow (v4.0 broke GitHub push from plugin — pipeline is now Obsidian Git → GitHub → Flowershow Cloud), Pandoc, Harper, Easy-typing, Callout-manager, Admonition. Writer’s setup. The vault intends to produce things that leave it.

Tags: daily, blog, clippings, causality, mpi, mutability, dario, anthropic. Low density. Almost no internal wikilinks (except the Hymn). Parallel thoughts, not a graph.

RECURRING STRUCTURAL SHAPES (*unchanged, still operative*)

Shape 1: The Generating Kernel

The unnamed center. Appears in five domains:

- **Landau_Shilov_Linear_Algebra_Bridge.md** — Lagrangian $L(q, \dot{q}, t)$
- **caib_bfm_heuristic_framework.md** — “Banks Never Voluntarily Lose Money”
- **Triplet Roots Language Model** — Arabic trilateral consonant root
- **Index.md Project 2** — “Dynamics as a unified science of change across systems”
- **A Modest Solution / preamble.md** — the “trivial solution”

New instance (surfaced April 2026): CramerGeneral.hs — the determinant as a sum over all $n!$ permutations. One formula, all solutions derived. Same skeleton.

Shape 2: The Escape Hatch That Reintroduces the Problem

Erlang/ETS, scientism-as-new-dogma, locked bootloaders, technology-as-opium. Now also: **Feyerabend → New Mechanism → post-Feyerabend philosophy as epicycle on the epicycle problem**. The field's response to Feyerabend is structurally identical to what Feyerabend diagnosed.

Shape 3: The Triage Protocol

Classifier under uncertainty, margin always works one direction.

Shape 4: Heuristic Over Formula

"Solve by incentive logic, not formula memorization." The vault attacks the axiom, never the proof.

NEW ORPHANS (since March 21)

"But What is a Machine" had a sibling born The question now has a provisional answer: a device that saves labor. But the deeper project — the Omnisiah as the name for learnable structure — has gone operational. DAY_1 reading list, skill architecture, GSoC Haskell, ETCSL extension. The machine is being built.

The Gilgamesh Note Two lines buried in a conversation: "Bilga/Gilga = ancestor. Mes = man/hero. Kilgamesh as the most plausible sound-change descendant." No file. No tag. A linguistic archaeology session that found a fragment and stopped. Not homeless because it's incomplete — homeless because it's too early.

The is-ought essay — still five sentences, still tagged #blog, still the unwritten first chapter. Status unchanged.

The Preface to "A Disinvitation from Islam" — still appended to a project list. Still doesn't know it's the most important thing in the vault.

INFRASTRUCTURE: UPDATES

Artifact	Change
Flowershow	v4.0 broke GitHub push from plugin. New pipeline: Obsidian Git → GitHub → Flowershow Cloud
Typst	Added to stack. Blog posts going forward
Limine	Dual-boot configured (G14: Arch; PC: Arch + Windows)

Artifact	Change
LHS publishing	Stable. Used for LEM paper (excluded_middle.lhs). Pandoc + XeLaTeX pipeline confirmed
uv	Locked as Python standard

NEGATIVE SPACE (*from March 21, updated*)

The Body — no longer fully absent. Back surgery happened. ResMed CPAP in use (seal issue logged). The body has asserted itself. This is not representation — it's an interrupt. Whether it becomes a domain in the vault remains open.

Money — unchanged. The study of money is thorough. The personal relationship with it remains invisible.

Completion — CramerGeneral.hs is the closest thing to a completed artifact that is also technically elegant. Announce it. That's a completion event. Do it.

Feedback — unchanged. Flowershow installed but silent. Blog exists but not tracked in vault. The intellectual project remains primarily internal.

The Ommissiah / Islam reconciliation — unchanged. Still the most important unwritten note in the vault.

THE ISOMORPHISM MAP (*unchanged, extended*)

"Banks never lose money" (CAIIB)
 "The principle of least action" (Landau)
 "The trilateral root generates all words" (Quran)
 "The actor model's isolation premise generates all its bugs" (Erlang)
 "The trivial solution" (A Modest Solution)
 "The determinant sums over all $n!$ permutations" (CramerGeneral.hs)

ALL OF THESE ARE:

A minimal invariant that generates all derived forms
 through a transformation under constraint.

"Epicycles all the way down" (Index.md)
 "Post-Feyerabend philosophy is an epicycle on the epicycle problem"
 "Constitutional AI as a Ptolemaic system" (Cost of Pre-Alignment essay)
 "ETS escape hatch reintroduces shared state" (Erlang)

ALL OF THESE ARE:

The solution to X becomes the new form of X.

Every escape hatch reintroduces what it was escaping.

PERFORMA (*updated*)

PERFORMA: The Kernel (working name)

BEACON:

Every domain you inhabit - physics, banking, Arabic linguistics, computation, philosophy, theology - has a minimal invariant that generates all its derived forms; you have been finding these invariants for years without naming the practice or building the connecting tissue between them.

GROUND:

- Landau_Shilov_Bridge.md: the invariant for mechanics (Lagrangian)
- CAIIB heuristic framework: the invariant for banking (incentive structure)
- Triplet Roots project: the invariant for Arabic (consonant root)
- CramerGeneral.hs: the invariant for linear systems (determinant via permutations)
- Semantic Journey skill: a method for navigating between invariants
- lhs-publishing skill: a tool for writing where code = proof = prose
- The Ommissiah theology: the name given to the fact that invariants exist and are learnable
- "A Modest Solution / preamble.md": the null hypothesis
- Identity confirmed: Abdul, IIT Patna TA, Canara Bank Branch Manager
- Devices: G14 (Arch/Hyprland, touchpad dead), PC (Omarchy, dual-boot, operational)
- The vault intends to publish. The publishing infrastructure now exists (Obsidian Git → Git)

EDGE:

One document that makes the isomorphism explicit and readable by someone who knows only one of the domains.

CramerGeneral.hs is ready to be that bridge for mathematics.

The Feyerabend/Constitutional AI connection is ready to be that bridge for philosophy of science.

Ship one. That's the proof.

UNKNOWN:

- Whether the Ommissiah / Islam reconciliation is a unification, a contradiction, or the most important question in the vault
- Whether the body (now forcing itself into view via surgery and CPAP) will become a domain where the kernel method works or breaks
- Whether completion is an aesthetic problem or an epistemological one

- What "A Disinvitation from Islam" becomes when it leaves the project list
- Gilgamesh: is this a one-session digression or the start of Spiral 8?

The ship has landed. The structure was already there.

The only thing that's different: the patient is recovering from surgery, the PC is running, and the determinant is general.

One note needs to leave the vault this week.
